Native rewards. Clear evidence.

OFFICIAL ROADMAP v1.1 | 03 NOV 2026

A public development plan focused on community experience, education, verified data, and transparency.

Why version 1.1?

Version 1.1 aligns the plan with the observed native Pump Holder Rewards configuration. It removes the proposed creator-fee allocation as a funding assumption, separates the unfunded Diamond Hands concept, and changes phase 6 to a transparency dashboard launch. No development phase is completed by this revision.

What is observed

A finalized Solana configuration snapshot on 03 Nov 2026 records **is_holder_reward=true** for CPRMoon. This is a historical observation of the native Pump Holder Rewards mode.

According to Pump documentation, the creator-fee portion in this mode is set aside for holders and distributed by Pump. Holders do not need to submit a claim instruction. The corresponding fee portion is not assumed to be income available to the development team.

What this does not establish

The snapshot does not prove any individual payment, eligibility, reward amount, minimum balance, payout interval, or investment return. This release does not implement a holder/payment dashboard or initiate distributions.

All six development phases remain Planned in the document baseline. Existing features or a configuration flag do not complete an entire phase.

DEVELOPMENT PLAN / SIX PHASES

Milestones before completion.

OFFICIAL ROADMAP v1.1 | 03 NOV 2026

Document baseline: 0 / 6 phases completed. Live administrator reviews may be newer than this PDF. No completion dates are guaranteed.

01 Foundation & trust / PLANNED

Document the native Pump Holder Rewards configuration and communicate its limits.

Evidence: Dated configuration evidence, official sources, and versioned public disclosures.

02 Community experience / PLANNED

Improve community features and explain native rewards in clear, accessible language.

Evidence: Accessible community flows, clear educational material, and a feedback channel.

03 Holder & payment tracking / PLANNED

Build a read-only view of holders and independently verifiable reward payment records.

Evidence: Reproducible test records, source links, coverage limits, and transaction references.

04 Treasury & accounting / PLANNED

Keep native Pump payments separate from community funds and any additional program.

Evidence: Separate ledgers, disclosed funding sources, wallet references, and reconciliations.

05 Data validation & security checks / PLANNED

Validate dashboard data, payment attribution, and application security.

Evidence: Data-quality test results, an access-control review, and documented limitations.

06 Rewards transparency dashboard launch / PLANNED

Launch a public read-only dashboard after its data and controls are validated.

Evidence: A working public dashboard, validated records, release notes, and community reporting.

SEPARATE COMMUNITY CONCEPT

Diamond Hands: future proposal.

OFFICIAL ROADMAP v1.1 | 03 NOV 2026

The proposed Diamond Hands program is separate from native Pump Holder Rewards. It is unfunded, inactive, and not confirmed as part of Pump's rules.

Silver 30+ days | 1.0x proposed loyalty weight

Gold 90+ days | 1.5x proposed loyalty weight

Diamond 180+ days | 2.0x proposed loyalty weight

Legendary 365+ days | 3.0x proposed loyalty weight

Weights, not yields

These proposed multipliers are loyalty weights, not interest rates, fixed returns, or guaranteed payouts. They do not define or alter Pump eligibility or allocation rules.

Funding assumption withdrawn

The earlier 30% / 50% / 20% creator-fee allocation proposal is withdrawn. No automatic receipt of native holder fees by the team, funded community reserve, or additional reward entitlement is claimed.

Before considering a separate program

- Identify and disclose independent funding, an approved budget, and a reconciled reserve.

- Define eligibility, holding age, partial sales, transfers, snapshots, related wallets, team-wallet exclusions, and an allocation method.

- Validate the tracker, security, operating obligations, and a funded pilot before any activation.

Community mission points remain non-financial. Connecting a wallet to the website does not activate a claim or guarantee a payment.

A record people can inspect.

OFFICIAL ROADMAP v1.1 | 03 NOV 2026

Public review workflow

An authenticated administrator can save a private draft, review the summary and evidence, explicitly confirm, and publish. Publication records the previous and new status, revision, evidence links, administrator wallet, and server timestamp.

Visitors can inspect published records without a wallet. Administrator approval is not an independent audit or an on-chain certification. Database owners retain administrative privileges.
